ABSTRACT

Biologically, a child is a human being between the stages of birth and puberty. The legal definition of child generally refers to a minor, otherwise known as a person younger than the majority. In the present study a survey was conducted to compare health status between 6 month age breast feed baby and bottle feed baby. The survey was carried out at Bhagwanpur-II block area, Purba Medinipur, West Bengal. The data was collected from Breast feed baby (n=15) and Bottle feed baby (n=15). The survey was found that different measurements like height, weight, and Gomez value, MUAC, Head and Chest Circumference were carried out. It was found that there was no significant ($p>0.05$) differences in Gomez value, MUAC, Head and Chest circumference between 6 month age breast feed baby and bottle feed baby. From the survey it was found that under weight.

Keywords: Breast feed baby and bottle feed baby Health, Comparison, Gomez value, Head and Chest circumference.
