## Report of Nursery Management and Plant Propagation Program, 2023

The Department of Botany at Mugberia Gangadhar Mahavidyalaya organized a comprehensive Nursery Management and Plant Propagation Program on April 29, 2023. The event was geared towards enhancing the practical skills of students and providing valuable insights into the art and science of plant propagation.

The program commenced with an introduction to the principles and techniques of nursery management, emphasizing the importance of this skill in sustainable agriculture, horticulture, and environmental conservation. Distinguished faculty members from the Department of Botany led informative sessions, covering topics ranging from seed germination to vegetative propagation methods.

To create an interactive learning environment, practical demonstrations were conducted, allowing students to witness and engage in hands-on experiences related to nursery management and plant propagation. These sessions aimed to bridge the gap between theoretical knowledge and practical application, empowering students with valuable skills applicable to real-world scenarios.

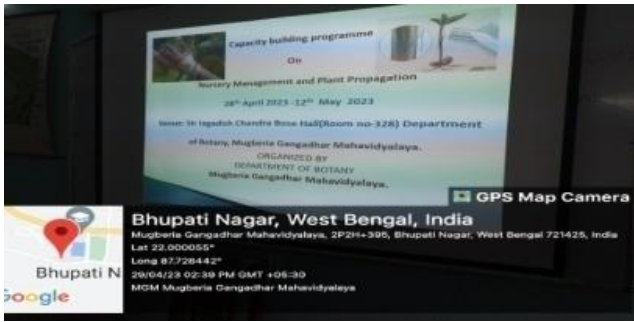

The importance of nurturing such skills was highlighted throughout the program, emphasizing their relevance in the context of modern agriculture, landscaping, and ecological restoration. Students were encouraged to actively participate, ask questions, and exchange ideas, fostering a dynamic learning atmosphere.

The Department of Botany believes that by equipping students with practical skills in nursery management and plant propagation, they are better prepared to contribute meaningfully to the field of botany and environmental sciences. The program not only expanded the knowledge base of the students but also instilled a sense of responsibility towards sustainable practices in horticulture and plant cultivation.
